Installing WMR89 PC software on Windows 10

Windows 10 requires digitally signed drivers for software installation. In order to complete the installation, it can be skipped by disabling the driver signature verification.

To disable driver signature verification:

1. Select Restart from the Power option on the Start menu.
2. Press and hold Shift key while clicking Restart.
3. Choose Troubleshoot after the computer is rebooted, click Advanced options and then click Startup Settings.
4. Click Restart to enter the Startup
5. Press F7 to select **Disable driver signature enforcement**. The PC will reboot and it will be able to install unsigned drivers without error messages.

6. Refer to the WMR89 PC software user manual for the software installation.
